

Hi guys,

I've been a forum member here for quite a while although most of my time is spent reading through interesting posts and trying to learn as much as I can. I have a bit of experience in article writing for some of you here (although, I already forget which), I've had 2 consistent clients with weekly orders of 10 to 20 articles each. I quit article writing after trying out PPC shortly after. I got burned pretty badly and now I'm trying to recuperate my losses through "sweat equity" a.k.a. writing quality articles for a very reasonable price.

So here's what I'm NOT going to do for you:

1. Use article spinners to churn out articles for you in a day's time
2. Flood your articles with choice key words
3. Sell your articles to other people

In exchange for your hard-earned money I will:

1. Write you unique articles min. 300 words– Copyscape ready
2. Deliver your article in 7 to 10 days depending on load
3. Make adjustments based on your recommendations even after payment

Some notes:

* Each package must be about one general topic. I can do gambling articles but not adult. If for any reason, I cannot finish it in 10 days max, I will give you a full refund.

* All article packages are on a first come first serve basis 7 – 10 days. In case of delay, I will inform you through email

* I can only work on 3-5 batches at any given time. I will notify you immediately if I cannot accommodate your order.

Price: \$25 per batch or \$5/article (5 articles per batch).

(Scroll down for the free prize!)

To order: Just send payment for \$25 per batch to
paowiee.articles@gmail.com

You can also email me in that address or pm 'paowiee1' at the WF if you have any questions or would like to talk to me about the topic.

Article Snippets:

1. Topic: Email

"The information that is digitally stamped on emails include the following: time-stamped records, date received and opened, the IP address used to send the email and the IP address of the intended recipient.

This is especially useful for companies who want to be assured that their important business emails actually get delivered and read. Companies receiving classified email would also want to know if the classified information comes from a reputable company or a scamming agency.

But email tracking or tracing can also be used by individuals, scammers, and phishers alike. A series of forwarded messages can be traced to the first sender by following a series of hops or digital stamps as the email gets sent from one place to the other. However when email tracing is used maliciously they can be intended for collecting information about businesses or individuals in order to create more effective phishing schemes, pranks, or targeted spam. In some cases, emails tracing has been used to locate people and to get to know more personal information by looking for social media websites such as Myspace, Friendster, and Multiply."

2. Topic: Pregnancy

"Many women, in their heart, believe that they have an intuition about being pregnant. "They just know" would probably describe it the best. More often than not, they are proven to be correct. Maybe you feel tired, queasy, and or lightheaded. Maybe you feel a little ache or stiffness in your lower back, have sore breasts that seem to be a little bit oversensitive. Those are just signs that a pregnant woman feels during the early stages in pregnancy."

3. Topic: Gaming

"Technical specs can easily be modified just like statistics in such a way that you can change perceptions by selectively focusing on what you measure and the way it is measured. Microsoft was the first one to release the next generation console so it had to release the spec sheet first. Meaning, Sony's marketing team was able to take a peek at it and focus on a marketing strategy that shows you the PS3s 51 billion operations per second during Sony's press conference after Microsoft boasted its 9 billion operations per second mark. Little do most people know that Sony combined both CPU and GPU performance numbers to come up with that mark and Microsoft only considered the performance of their CPU unit. The differences between the two aren't so great when you consider that the Xbox 360 has 33.6 billion operations per second under its belt if you include their GPU."

Free Prize (yes, everyone loves this part)

In addition to writing articles, I will submit 2 articles for every batch you order to iSnare.com, an article distribution service for **FREE**. iSnare.com will distribute your article to over 1,000+ sites depending on the topic. Yes, I'll include your signature box and a link to your site.

I cannot guarantee how much traffic you'll get from this kind of submission but I'll guarantee that I'll submit 2 out of 5 for every batch of articles that you order to iSnare's article distribution service at no cost.
